Care & Cleaning

Spot Cleaning

For Light Soiling:

A solution of 10% household liquid dish soap with warm water applied with a soft damp cloth will remove most soiling. If necessary, a solution of liquid cleanser and water can be applied with a soft bristle brush. Wipe away residue with a water-dampened cloth.

For the Most Difficult Stains:

Dampen a soft white cloth with a solution of household bleach (sodium hypochlorite); 10% bleach, 90% water. Rub gently. Rinse with a water-dampened cloth to remove bleach concentration. If necessary, allow a 1:10 diluted bleach solution to puddle on the affected area or apply with a clean, soaked cloth for approximately 30 minutes. Rinse with a water-dampened cloth to remove any remaining bleach concentration.

NOTE: You should try this method on an inconspicuous spot before using it on the original stain/soiling.
